Today I round out my Wahls-inspired series on the health benefits of eating various classes of plant matter. If you're just now joining us, be sure to watch the video in which Terry Wahls explains how eating a Paleo diet rich in leafy greens, cruciferous vegetables, and brightly colored produce (plus meat and seaweed and fish and offal) coincided with a regression in her rapidly-progressing MS.

### **Why You Should Eat Brightly Colored Fruits and Vegetables**

What's New and Beneficial About Pears. For nutritional reasons, we're often advised to consume the skins of fruits. However, it's less often that research provides strong evidence in support of this advice.

Phytochemicals with antioxidant properties tend to be brightly colored because they contain chromophores, ie, a series of alternating single-bonded and double-bonded carbons. Isoprene is often the building block of such units. The darkest green vegetables contain the most chlorophyll, and vegetables with the most chlorophyll require the most antioxidants.

Etymology. The name derives from the Ancient Greek word πολύς (*polus*, meaning "many, much") and the word phenol which refers to a chemical structure formed by attaching to an aromatic benzenoid ring, a hydroxyl (-OH) group akin to that found in alcohols (hence the -ol suffix). The term polyphenol appears to have been in use since 1894. Definition of the term polyphenol
