X-ray film displays the radiographic image and consists of emulsion (single or double) of silver halide (silver bromide (AgBr) is most common) which when exposed to light, produces a silver ion (Ag +) and an electron. The electrons get attached to the sensitivity specks and attract the silver ion. Subsequently, the silver ions attach and clumps of metallic silver (black) are formed 1,2.

Paraspinal gangli neuromas are extremely rare. Like neuroblastomas and gangli neuromas, gangli neuromas are derived from the primordial neural crest cells that form the sympathetic nervous system.. Please refer to gangli neuroma for a more general discussion including epidemiology, clinical presentation, and treatment and prognosis.

A bone fracture (sometimes abbreviated FRX or Fx, F x, or #) is a medical condition in which there is a partial or complete break in the continuity of the bone. In more severe cases, the bone may be broken into several pieces. A bone fracture may be the result of high force impact or stress, or a minimal trauma injury as a result of certain medical conditions that weaken the bones, such as ...

Introduction. Enteral nutrition (EN) refers to the system of providing nutrition directly into the gastrointestinal (GI) tract bypassing the oral cavity. 11 Each year in the United States, this nutrition support modality is used in 250,000 hospitalized patients annually from infants to older adults. 12 EN is also widely used in subacute, rehabilitation, long-term care, and home settings.
