Evolutionary Psychology. In its broad sense, the term "evolutionary psychology" stands for any attempt to adopt an evolutionary perspective on human behavior by supplementing psychology with the central tenets of evolutionary biology. The underlying idea is that since our mind is the way it is at least in part because of our evolutionary past, evolutionary theory can aid our understanding not ...

Evolutionary Psychology | Internet Encyclopedia of Philosophy

Cognitive psychology traces its roots to the observations of the Greek philosophers Socrates, Plato, and Aristotle. In modern times, it owes its development mainly to the works of the German philosopher Wilhelm Wundt (1832-1920) who believed that learning is not merely an accumulation of facts and events but occurs when understanding is achieved, his US contemporary William James (1842-1910 ...

The Cognitive Dissonance Experiment is based on the theory of cognitive dissonance proposed by Leon Festinger in the year 1957: People hold many different cognitions about their world, e.g. about their environment and their personalities.

Cognitive Dissonance Experiment by Leon Festinger

Jean Piaget (1896-1980) was one of the most influential researchers in the area of developmental psychology during the 20th century. Piaget originally trained in the areas of biology and philosophy and considered himself a "genetic epistemologist." He was mainly interested in the biological influences on "how we come to know." He believed that what distinguishes human beings from other ...
