Uses Of Complex Analysis

Complex segregation analysis (CSA) is a technique within genetic epidemiology to determine whether there is evidence that a major gene underlies the distribution of a given phenotypic trait. CSA also provides evidence to whether the implicated trait is inherited in a Mendelian dominant, recessive, or codominant manner.

The following analysis reveals a comprehensive look at the Storyform for Hamlet. Unlike most of the analysis found here—which simply lists the unique individual story appreciations—this in-depth study details the actual encoding for each structural item. This also means it has been incorporated into the Dramatica Story Expert application itself as an easily referenced contextual example.

Particle Finder - Automated Characterization and Raman Analysis of Particulates. ParticleFinder offers a user friendly tool for automated location, characterization and Raman analysis of particles. Hundreds or thousands of particles can be quickly located on a video image, analyzed for size and shape descriptors, and then chemically characterized using Raman spectroscopy.
